

GASKETS & TRACKS: WINDOWS (APPLICATION: WINDOWS)

1. INTRODUCTION

Gaskets and tracks are often very difficult to select since there are many variables involved with determining the correct gasket or track that must be replaced. This guide serves to help as a resource in determining the correct gasket or track for your installation.

2. SELECTING YOUR GASKET OR TRACK

The following chart outlines a series of window models based on “fixed” (Section A, window does not slide or open, except for one exception – W106 Flip Out) versus “sliding” (Section B) windows with variations in glass thickness. In addition, where pile weather stripping is used, windows and the type of weather stripping is identified in Section C. All quoted part numbers are available directly from www.theamtstore.com.
