

TRIOVING LOCK REMOVAL (KEYTURN & THUMBTURN)

1. TOOLS

- Flat Head Screw Driver

2. REMOVE THE KEYTURN OR THE THUMBTURN:

Both the Keyturn and the Thumbturn are attached to the lock case by a single screw fixed through the face plate of the lock case. Remove the screws and the lock assemblies can be pulled out of the lock case.

3. REPLACEMENT PARTS

There are a few considerations for replacing your thumbturn and keyturn locks:

- Do you have a specific key requirement, that is, to match other key sets on your vessel? For example, what key “group” do you require?
- If a specific key is important, note the key number in all communications with www.theamtstore.com.
- What finish do you require? Satin chrome is the standard lock cylinder finish.

4. KEY GROUPS

For those customers who require a specific key set, please refer to the following guide for key group selection.

TrioVing Keyed Cylinders, Keyed Alike, 32mm with 3 Keys

Key Group	Finish	Part Number	Notes
Group 2	Satin Chrome	HW-LS5520010A2
