

When wider access is needed, FREEMAN MARINE French doors perform like two single panel doors that seal to each other. The same high quality tooling and construction techniques used to make the single leaf door are put to work in the construction of each French door. Doors feature thick panel skins, extra internal reinforcements, no exposed seams and all welded construction to create a rugged closure in individually dogged versions. Panels feature a lineal brushed finish, with the option of paint to your color specifications. Solidly constructed and fully insulated, these French doors are suitable for the following typical high traffic access installations:

- Salon • Main Deck • Owner's Cabin
